

host local share global.

From Limburg to the world.

Welcome to **partimus**. In our very own data center – connected to the world largest data hub Frankfurt – we provide first-class cloud and managed services.

Our state-of-the-art data center in Limburg – in the middle of Germany – offers a reliable infrastructure which ensures that your data is perfectly protected at all times and available around the clock.

What makes our data center stand out?

As an owner-managed German company, partimus guarantees special security and trustworthiness, which is underpinned by certifications such as ISO/IEC27001. Furthermore, we rely on industry leading solutions from Microsoft – hybrid or cloud-only with Azure.

Through continuous upgrades and expansions, we always ensure the latest standard. At the same time we value sustainability and energy efficiency.

Our investments in green technologies help to conserve resources, optimize operating costs and to offer fair prices.

This is how the future is shaped.
Discover your possibilities.

Whoever has the choice...

partimus provides the know-how and the complete range of professional services around our very own datacenter in Limburg, Germany.

Whether AI infrastructure services, scalable colocation, flexible cloud services with Microsoft Azure and Proxmox, or customised managed services with Azure Virtual Desktop – partimus is your professional partner for a wide range of topics regarding network infrastructure, cloud migration and consulting.

Colocation

- state-of-the-art data center according to Tier 3 standard (redundant power supply, ultra-modern cooling systems, highly secure environment thanks to multi-level security systems with video surveillance and access control, reliable power supply through emergency generators and efficient gas extinguishing system)
- ISO/IEC27001 certification for the highest security standards
- redundant dark fibre ring to two locations in Frankfurt – for fast and reliable network connections
- 400G equipment by Arista for fast data transfer
- up to 22kW power provision per rack possible (high-density racks)
- state-of-the-art cooling technology for maximum energy efficiency
- flexibility and scalability of your required resources
- professional support in setting up and managing your colocation infrastructure and remote hands service

IP Transit

- direct, fast and reliable network connection to the world's largest data hub in Frankfurt am Main
- high 400G uplink capacity with high-performance, low latency
- premium traffic mix to all Tier 1 providers in the world

Cloud Services

- Azure Stack HCI solutions for seamless integration and world-class support for your hybrid cloud scenarios
- hybrid Microsoft world with a specially customized solution for hybrid identity management in conjunction with Azure/Entra AD
- efficient hybrid collaboration with all Microsoft 365 products

Managed Services

- customized services tailored to your IT challenges
- Azure Arc implementation for hybrid infrastructure management:
- your private Managed Azure Stack HCI in combination with Azure Virtual Desktop (AVD)
- your own managed cyber security solution with Azure Stack HCI or Managed SOC for your hybrid environment
- smooth and secure migration of your workloads from VMware, Citrix or Hyper-V with our professional migration services
- a modern and secure workplace with Microsoft 365, Intune, Windows Cloud Desktop or Azure Virtual Desktop
- Microsoft licenses – optimal and cost-optimized license models for your company
- 24/7 monitoring and support

We offer more

Within the primeLine Group, we are able to configure and build dedicated servers specifically for your requirements. This enables us to guarantee maximum performance, reliability and availability.

On request, your servers can be monitored 24/7 to guarantee smooth, trouble-free operation and the highest security standards.

We supply all the necessary components from our own production:

- Managed dedicated servers for first-class performance and flexibility
- Dedicated GPU servers for graphics-intensive applications in real time
- High-performance AI servers for complex, compute-intensive AI processes
- Dedicated storage with high-performance and high-end security
- Dedicated cluster solutions for maximum data processing with reliable system architecture, highly scalable

Our IT experts can advise you on a wide range of topics, including network infrastructure, cloud migration, data protection and compliance.

If you are faced with the challenge of optimizing or expanding your IT infrastructure, we are here to support you.
